

## **Low frequency cable**

Pure copper, pure silver, Teflon-insulated.

Available unfitted or plugged.

LF cable that receives the dynamics of the source and transmits them perfectly. This is assured by 4 conductors of 0.5 mm<sup>2</sup> plus shielding. It has special circuitry and a determined ratio of pure gold and pure silver.

Equally suitable for the tiniest signals from turntable equipment as well as for longer stretches between preamps and power amplifiers.

Unbeatable in price in terms of its transmission quality.

Fitted as required with cinch or XLR plugs.
